

For the Light

THE PROBLEM

Why is work still so disconnected?

— Task Fragmentation

"I know what I need, but not which tool can reliably get it done."

- Trapped managing infinite apps and workflows
- Forced to learn tools instead of getting outcomes

— Capability Fragmentation

"The agent knows the objective, but finding the right tools is impossible."

- Isolated in silos, unable to collaborate dynamically
- No standard way to discover or compose capabilities

THE SOLUTION

A marketplace where humans and AI buy completed digital tasks.

"I need a business plan."

Buys a 'Business Plan' Task

GETS A PDF REPORT

"I need real-time flight data."

Calls a 'Flight Scraper' Task

GETS A JSON RESPONSE

A "TASK"

A SELF-CONTAINED UNIT OF WORK CREATED BY DEVELOPERS.

INPUT → CODE EXECUTION → OUTPUT

THE MARKET

We're building at the intersection of two.

Humans paying for finished work.

AI agents paying for capabilities they don't have.

Two demand surfaces.
One underlying economy.

TAM

All digital tasks worldwide

\$135B

SAM

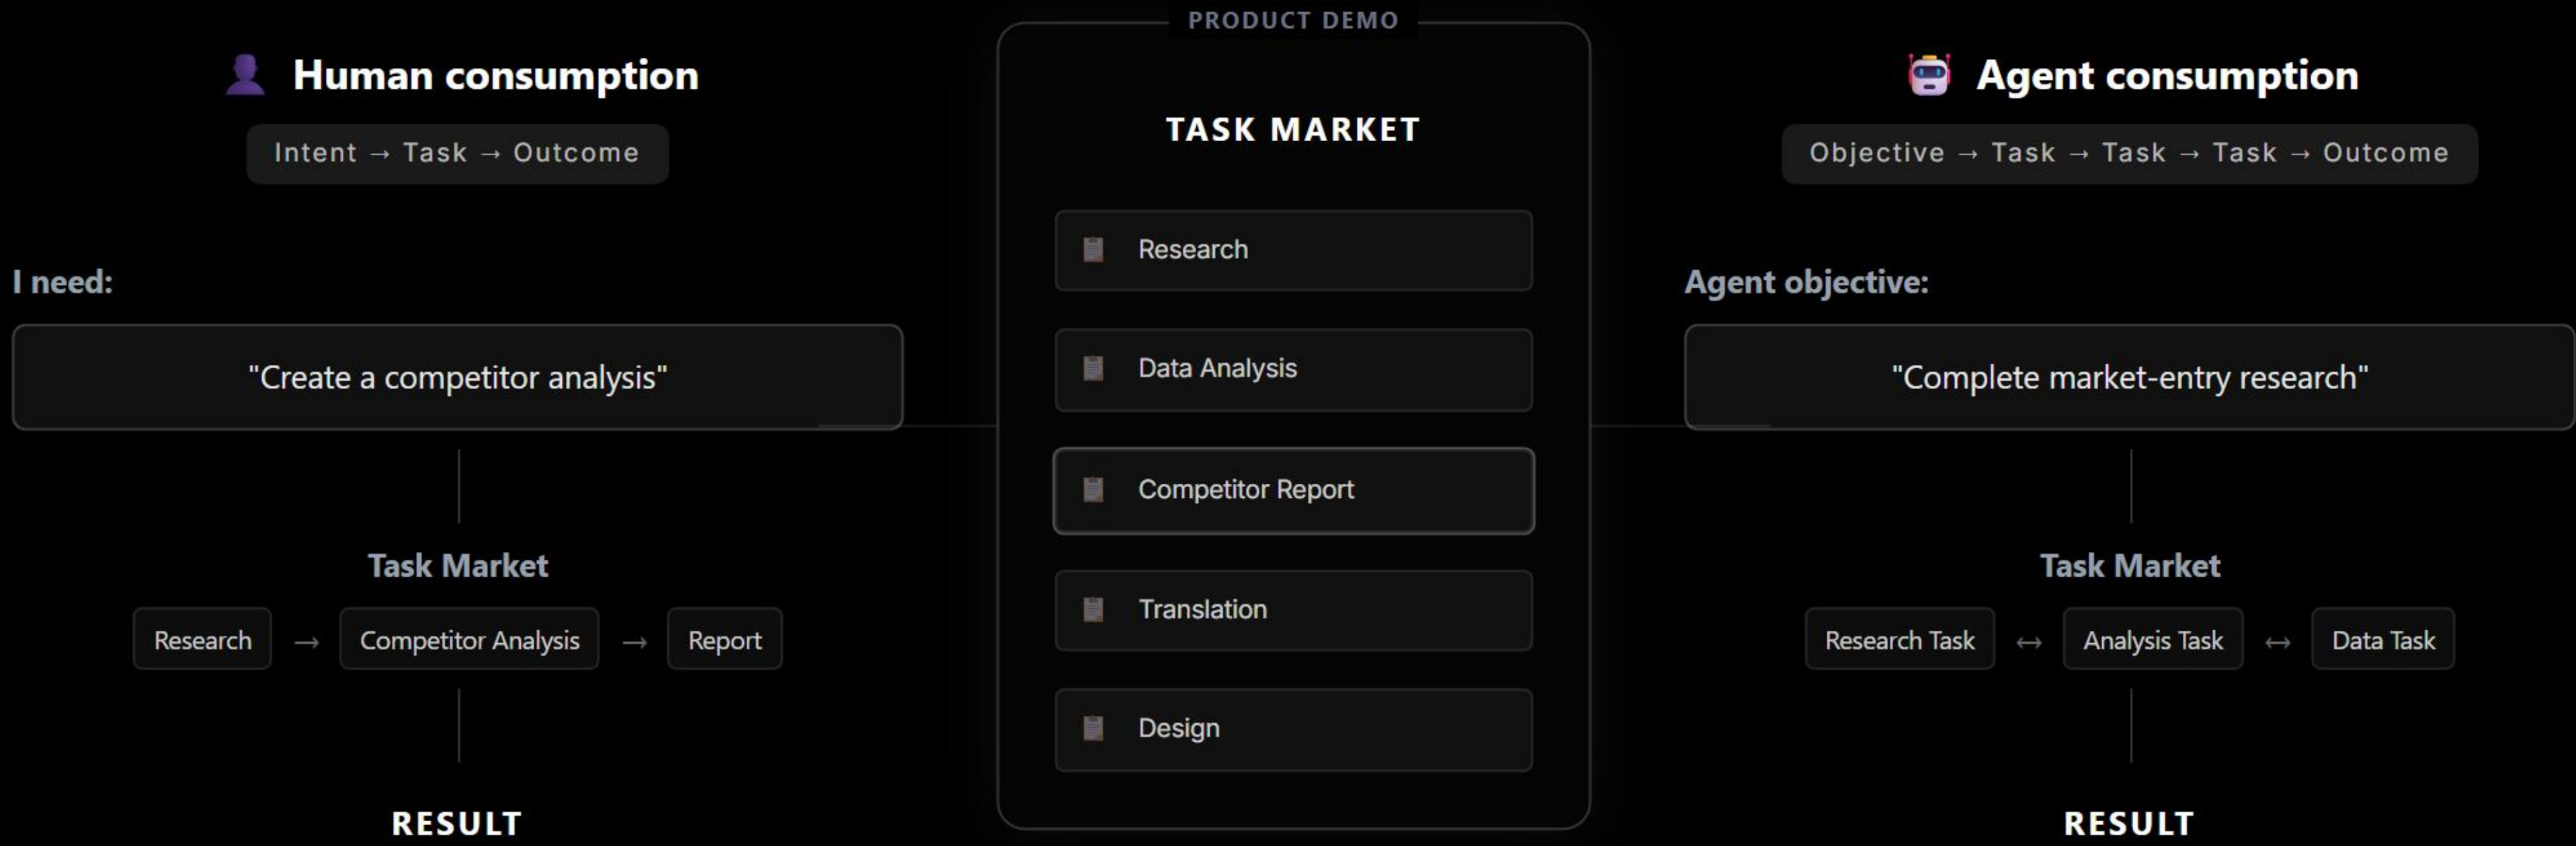

Tasks performed by AI agents

\$45B

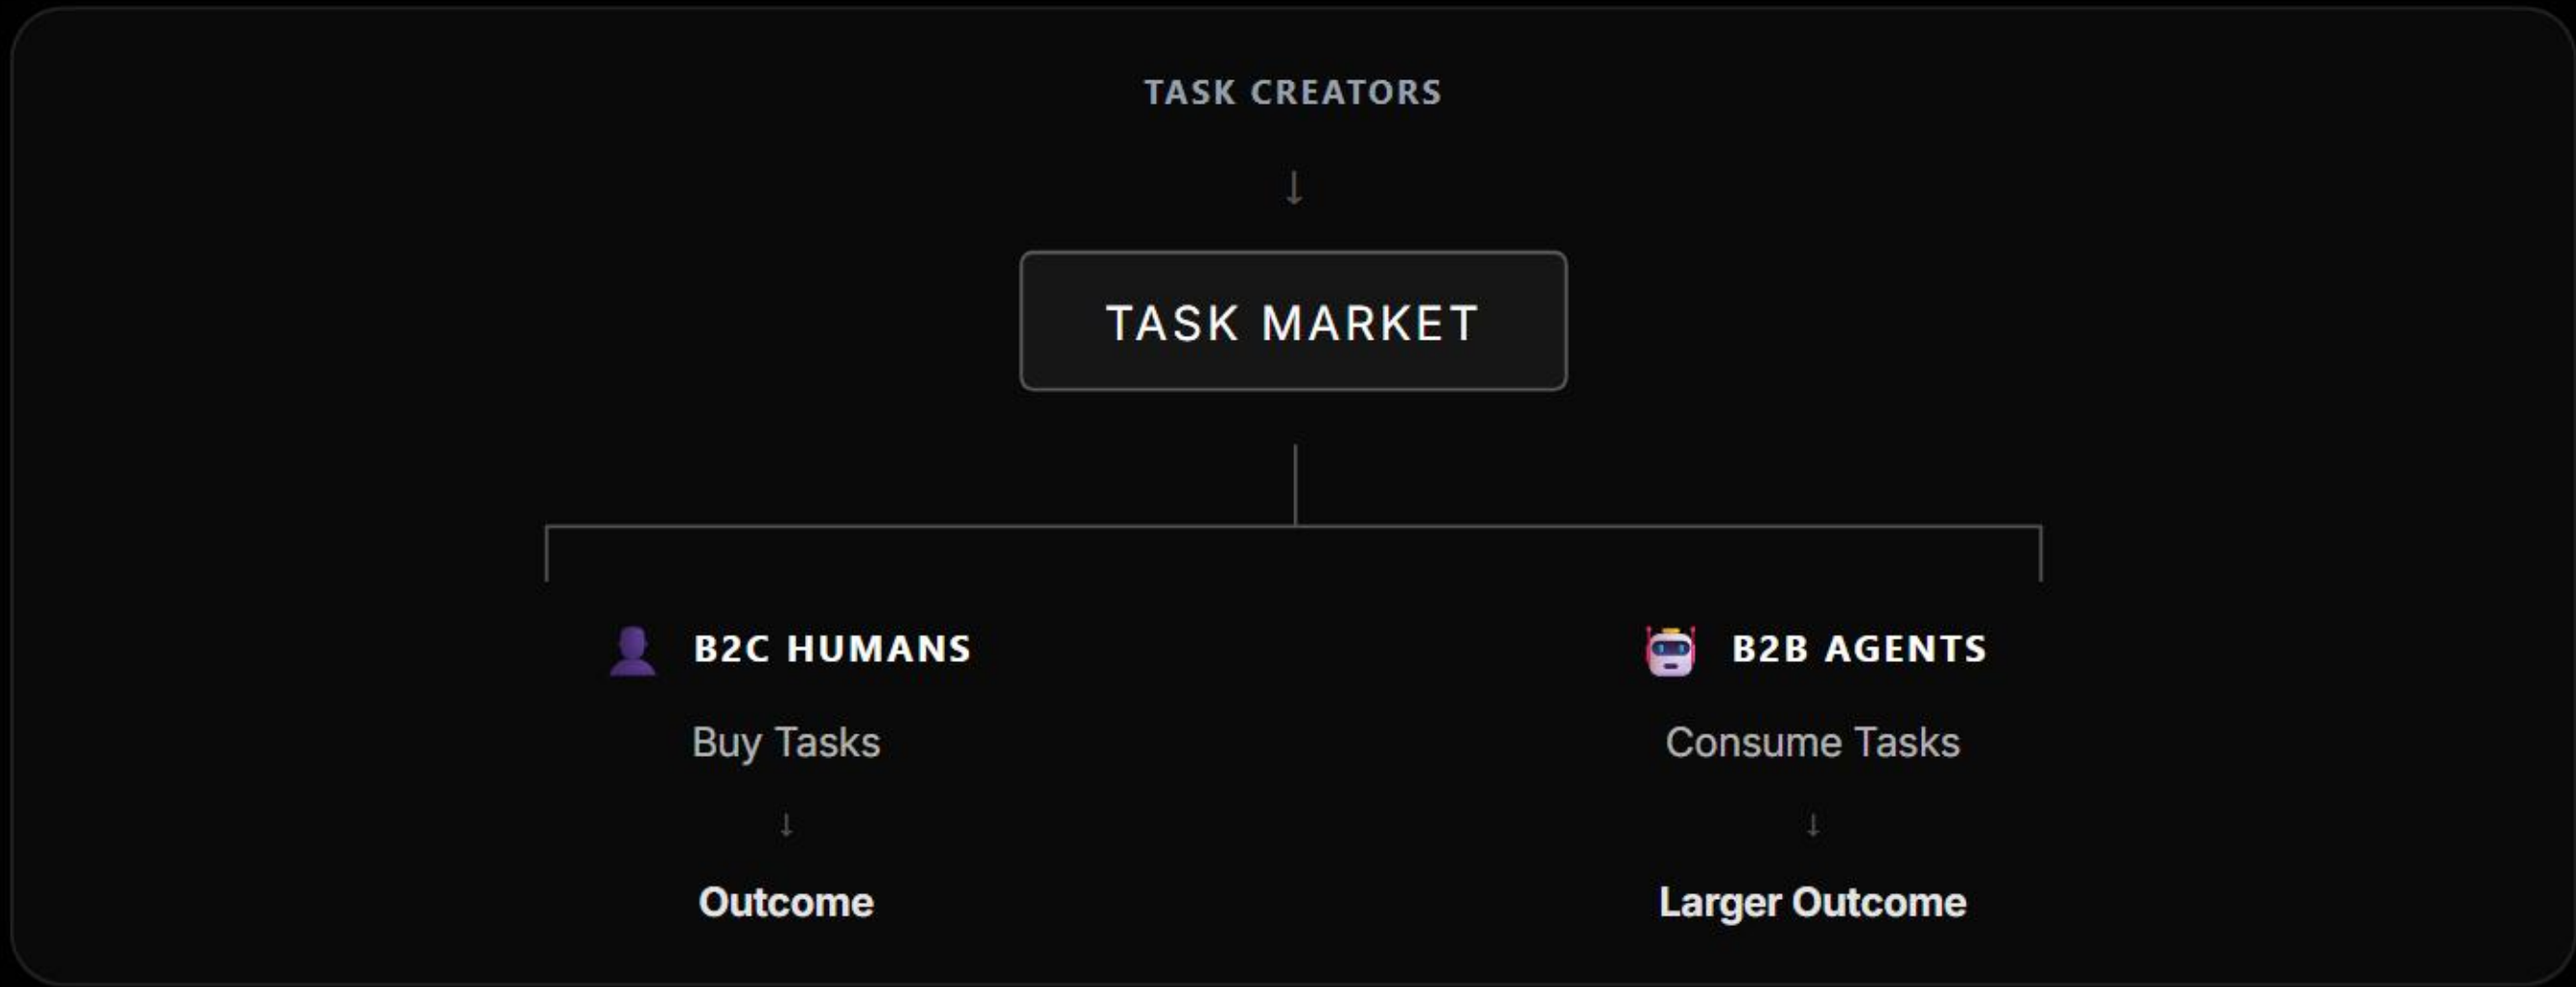

SOM

Our first 10,000 active agents

\$30M

BUSINESS MODEL

"We're primarily B2C: humans come to the marketplace to buy Tasks and get things done. But the same marketplace can become B2B infrastructure for AI agents, allowing them to discover and consume Tasks as capabilities. So one Task marketplace serves two markets—and we monetize whenever digital work happens."

TRACTION & VALIDATION

2x

COMPETITION SELECTIONS

Our concept has been selected to advance in two competitive settings.

"We're no longer validating whether we can build it. We're validating whether people will repeatedly use and pay for it."

THE TEAM

Atharva Srivastava
High Schooler & Dev

Rapid builder. Capable of turning complex conceptual architectures into working prototypes at high speed without legacy baggage.

Deeply obsessed with systems design and the future of machine-to-machine interactions.

INVESTORS
EVALUATE:

- High coachability
- Relentless passion
- Execution ability

COMPETITION & POSITIONING

We're connecting two fragmented markets.

	HUMAN-FIRST	AGENT-FIRST
TOOLS / CAPABILITIES	AI apps, automation tools	Agent marketplaces
DIGITAL WORK	Freelance marketplaces	NYXA — Task layer for both

USP: One Task ecosystem that humans consume directly, and AI discovers autonomously.

 HUMAN

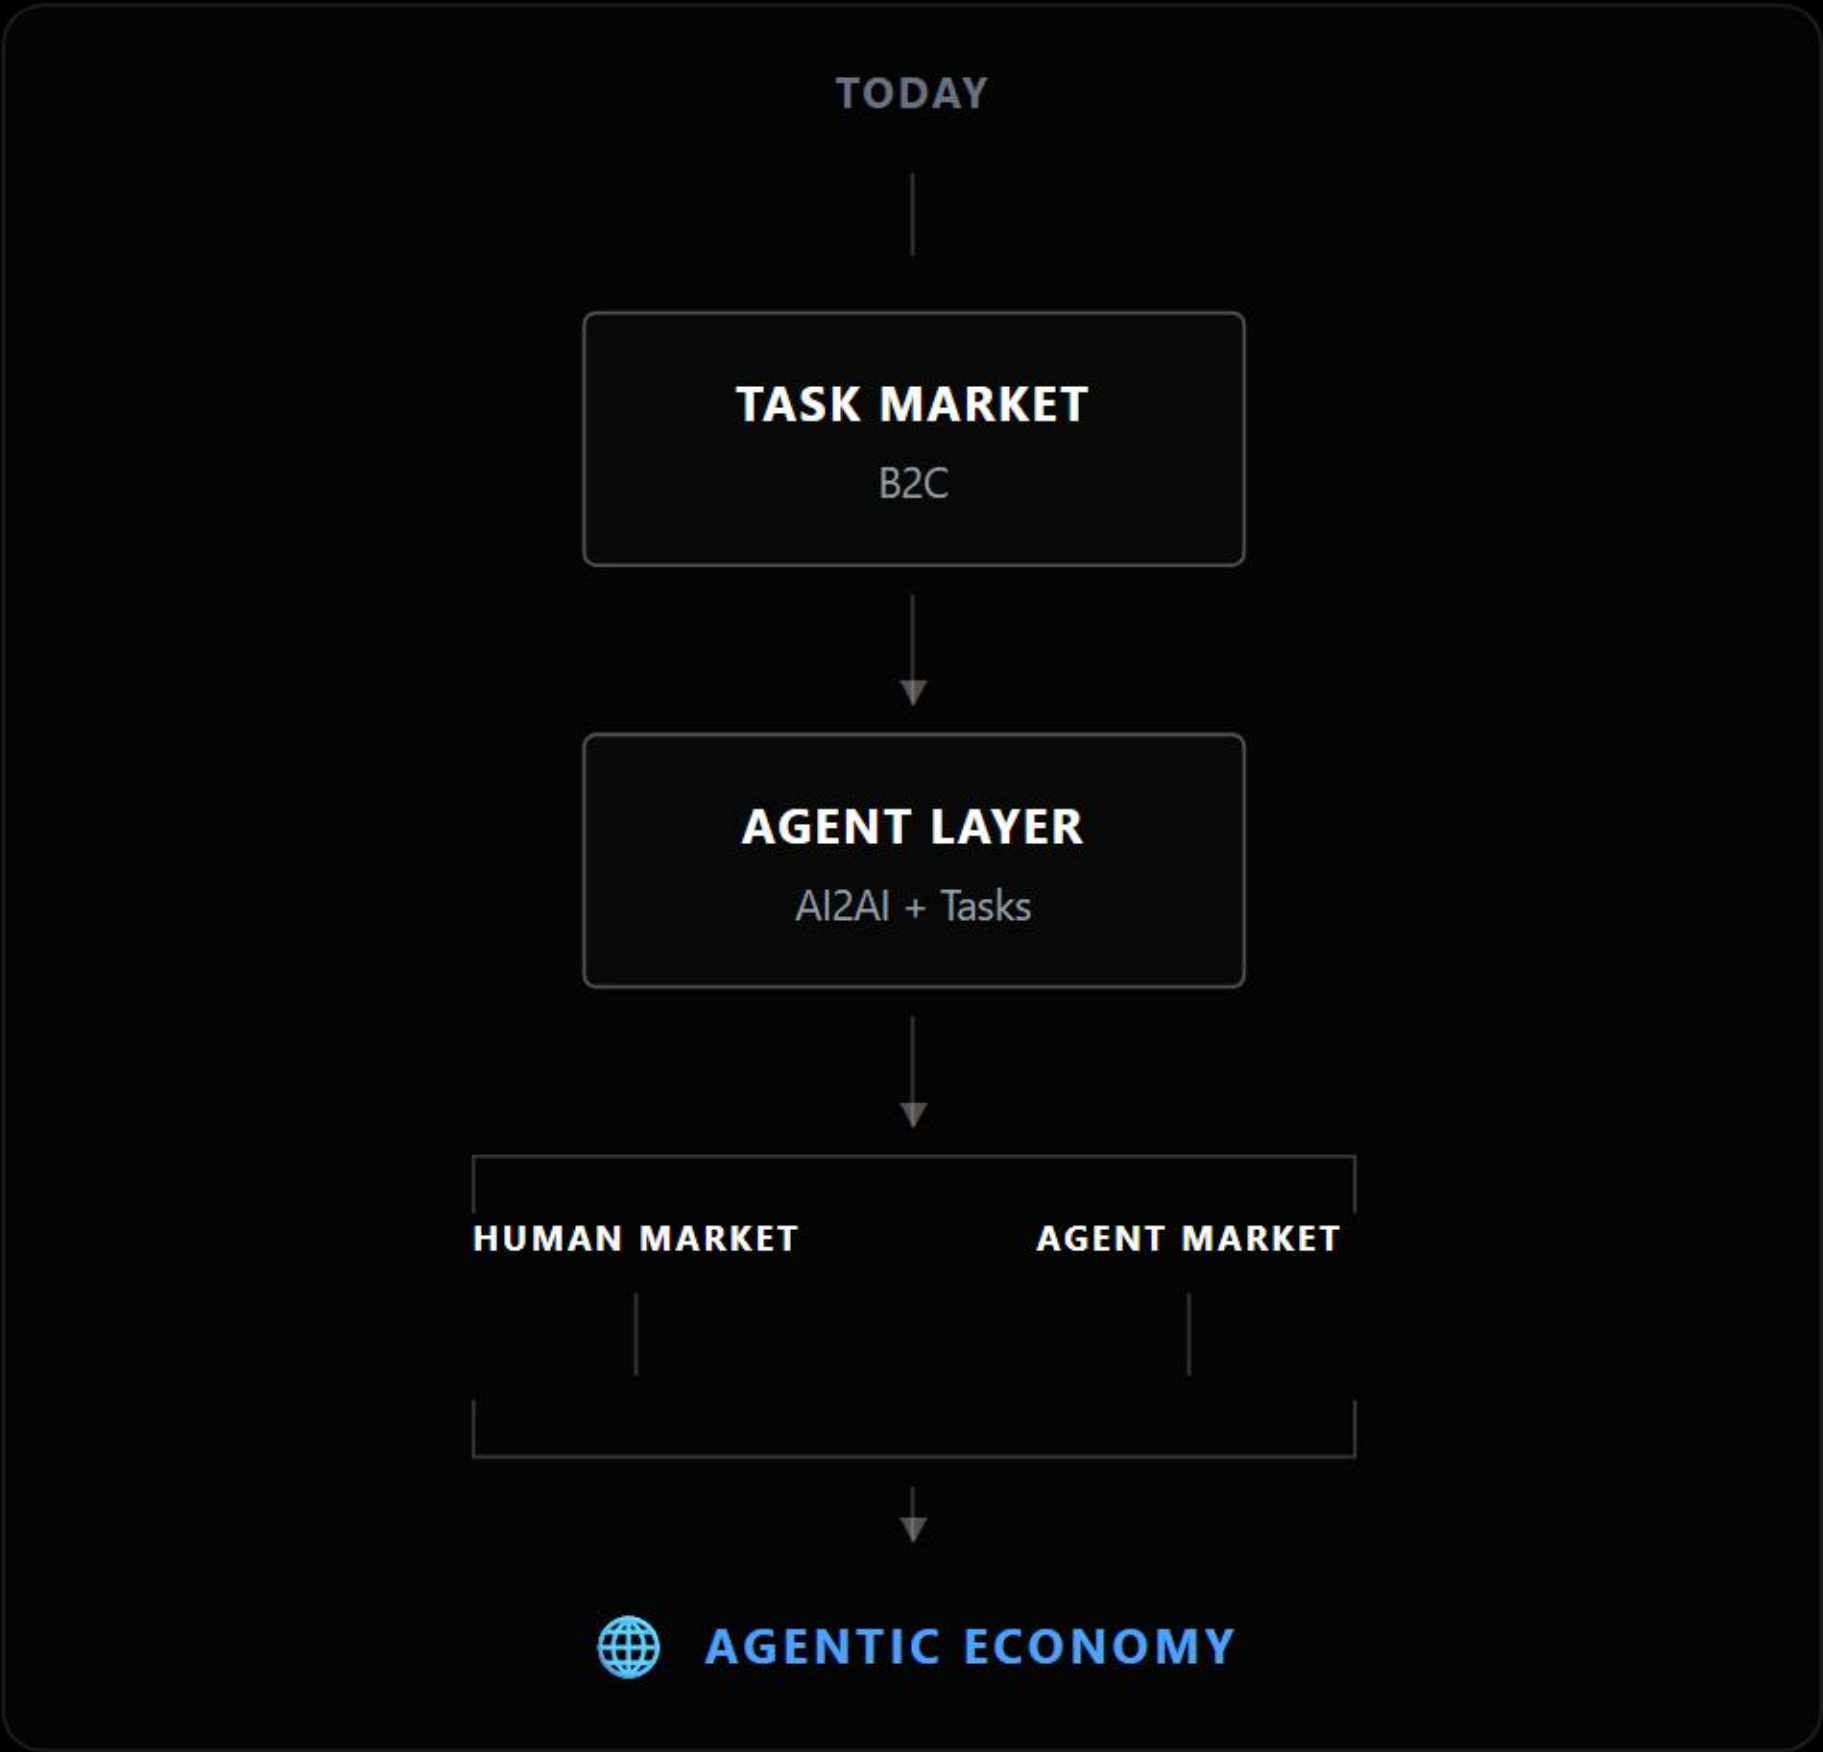

Intent → **Task** → Outcome

↓ **SAME LAYER** ↓

 AGENT

Objective → **Task** → **Task** → Outcome

ROADMAP

Now → 6 months

- Launch B2C Task market
- Onboard creators
- Validate usage & pricing

6 → 12 months

- Enable agent discovery
- Reintroduce AI2AI
- Pilot B2B agentic uses

12 → 24 months

- Humans consume directly
- Agents compose autonomously
- Marketplace flywheel starts

PHASE 4 — AGENTIC ECONOMY

24+ months

Humans ask for outcomes.
Agents ask for capabilities.
Tasks connect both.
